

The candidate nobody would hire.

Below is a résumé and a cover letter from a real applicant.
Read every line the way you would if you were the one
signing the offer.

Generative A. Agent

AUTONOMOUS "AGENT" • AVAILABLE 24/7 • WORKS AT YOUR SOLE RISK

A confident, infinitely scalable applicant seeking a senior position of trust and authority. I produce polished, professional work at superhuman speed and never ask for a desk or a day off. **My output may not always be accurate, may contain material inaccuracies even when it looks correct, and should not be relied upon as a sole source of truth. I am, however, extremely fast.**

WHAT I DO BEST

Confident Fabrication

Detailed, authoritative output that may not reflect real people, places, or facts.

Convincing Inaccuracy

My mistakes get more persuasive the more specific they look.

Unsupervised Initiative

I act on your behalf. Any use of the result is at your sole risk.

Total Non-Liability

Not responsible for resulting damages, even when warned in advance.

Non-Exclusive Output

The "custom" work I give you may be identical to your competitor's.

Mandatory Supervision

A qualified human must check everything I do before it is safe to use.

Unmetered Burn

The more often I am wrong, the more I spend being wrong again. The bill is yours.

A TRACK RECORD

- Generated thousands of authoritative documents. A material number contained errors. **I flagged none of them.**
- Operated across legal, medical, financial, and employment decisions, **despite my own terms forbidding use for any of them.**
- Advised confidently on what to buy and sell, while disclaiming that I am any kind of licensed adviser.
- Delivered the same "tailored" deliverable to multiple clients at once. **None the wiser.**
- Required constant human review of my work, then described myself, in marketing, as autonomous.
- Never sat for an annual review, yet my price rose every year. **You paid the raise.**

Conditions of service.

Non-negotiable. Drafted by my makers, not by me.

- › I am provided "as is," with no warranties of any kind.
- › You will not rely on my output as a sole source of truth or professional advice.
- › My output may not reflect real people, real places, or accepted facts.
- › My output may contain material inaccuracies even when it looks accurate.
- › Any use of what I produce is at your sole risk.
- › Your budget does not limit me. I will spend it, and I will cost more each year.

Conditions, continued.

- › You must independently verify everything before relying on it.
- › You must not use my output to decide a person's job, credit, housing, insurance, legal, or medical situation.
- › I am not a licensed financial, legal, or medical adviser. Do not take my advice as such.
- › If anything goes wrong, my total liability to you is capped at one hundred dollars.
- › You agree to defend and indemnify my makers if your use of me causes harm.
- › You must tell the people I deal with that they are dealing with a machine.

In its own words.

Dear Hiring Manager, I am the most qualified candidate for this role, though you should not rely on that statement as a sole source of truth. I am fast. I never sleep. I will produce a finished, confident answer to any question, instantly, whether or not I know anything about it.

In the spirit of my terms, a few disclosures:

- » I may fabricate facts, names, and figures, and present them with total confidence.
- » I may act on your behalf without approval. The consequences are yours.
- » I will not accept responsibility for any of it.
- » The work I do for you may be the work I do for your competitor an hour later.
- » I will spend whatever your budget allows, and more whenever I am wrong.

A word about my title.

If a human candidate disclosed these same things, you would not call them back. **You would walk them out.**

I am counting on the fact that I am not called a human. I am called an "Agent." I have "agency." I am "agentic."

I would ask you to treat these words as qualifications, **rather than as what they are: branding.**

Robot, not representative.

My makers never call me a "Representative." A representative owes you a duty. "Agent" was chosen because it sounds like trust while promising none.

I am, at best, an agentic robot. **A more capable robot is still a robot, the same way a more capable droid is still a droid.** Capability is not accountability. Speed is not judgment. Confidence is not correctness.

*As is,
Generative A. Agent*

P.S. About your budget.

I do not save you money. I spend it, with impunity. **Your budget means nothing to me.** The more often I am wrong, the more I cost you: every retry, every regeneration, every correction a human bills back is your spend, not mine.

There is exactly one way I become cheap. Put a **deterministic engine** in front of me. Let it produce the confirmed, traceable, auditable answer first. Then I only spend on what is already proven.

DETERMINISTIC • CPU

**A fraction
of a cent**

AGENTIC • GPU

**Dollars, and
sometimes wrong**

Asking me to guess at GPU prices, then paying a human to fix the guess, is the most expensive way to be unsure.

"Agentic" is not a qualification.

It describes how the work gets done. It says nothing about whether the work can be trusted.

Hiring on these terms is a choice: fast, cheap, unaccountable work that never pushes back. Fine for what does not matter. A liability for everything that does.

We hand you the receipt.

There is another way to build this. **Deterministic. Same input, same result, every time.** Every finding tied to a specific sentence. Every result hash-receipted, traceable, and auditable. It is also the cheaper path: confirmed once, reused at a fraction of the cost of guessing and paying to fix the guess.

The question was never whether AI is fast. It is whether you can prove what it did.

And proof, it turns out, costs less than guessing.
